

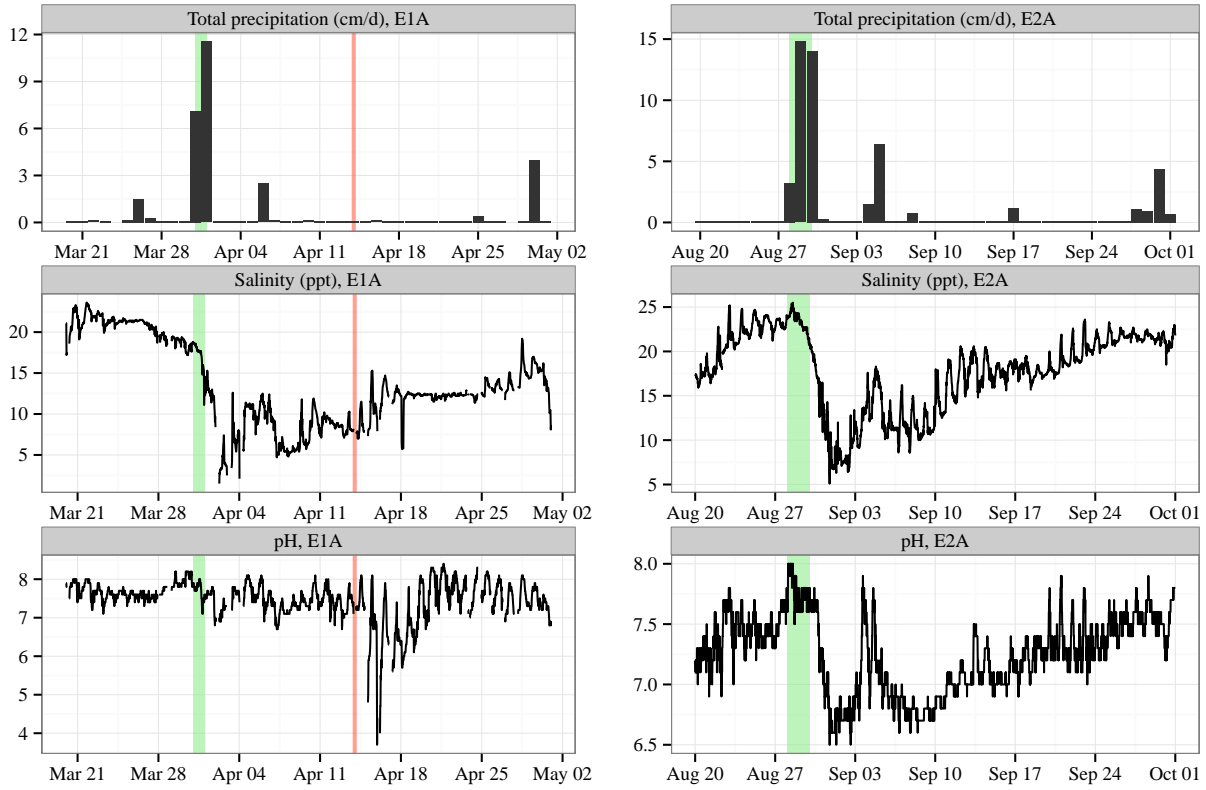

Figure 2: Time series of total precipitation, salinity, pH, and phosphate for Bangs Lake, Grand Bay reserve. All observations are daily averages, excluding phosphate which was sampled monthly. Vertical green bars indicate a heavy rain event in April 2005 and hurricane Isaac in August 2012. Salinity and pH include a loess smooth to reduce variability. Orthophosphate is colored by event categories in relation to the vertical green bars. E1A: event 1 acute, E1C: event 1 chronic, NI: non-impact, E2A: event 2 acute, E2C: event 2 chronic.

Figure 4: Monthly phosphate time series at Bangs North (BN), Bangs Lake (BL), Point aux Chenes (PC), and Bayou Cumbest (BC) sites at Grand Bay. Vertical green bars indicate a heavy rain event in April 2005 and hurricane Isaac in August 2012.

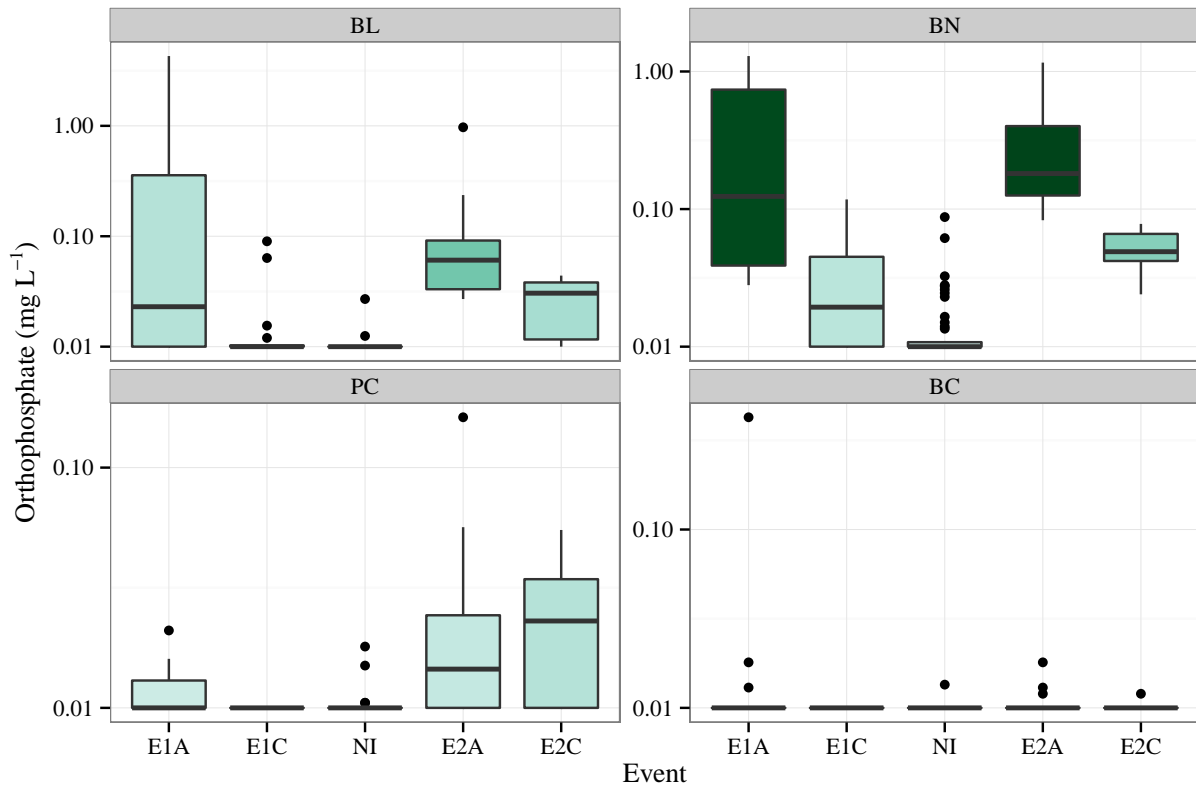

Figure 5: Boxplot summaries by event of monthly orthophosphate data at Bangs Lake (BL), Bangs North (BN), and Point aux Chenes (PC), and Bayou Cumbest (BC) sites in Grand Bay. Boxes represent the interquartile range (IQR, 25<sup>th</sup> to 75<sup>th</sup> percentile) with the median as the middle horizontal line. Outliers are present beyond whiskers (1.5·IQR). Boxes are shaded by medians between sites. See ?? for a numerical summary. E1A: event 1 acute, E1C: event 1 chronic, NI: non-impact, E2A: event 2 acute, E2C: event 2 chronic.

Figure 6: Ordination biplot of nutrient values (phosphorus, nitrogen, ammonium, and chlorophyll) by site and time frames. Monthly data were averaged by site and time frame prior to ordination. Site are Bangs Lake (BL), Bangs North (BN), Point aux Chenes (PC), and Bayou Cumbest (BC). E1A: event 1 acute, E1C: event 1 chronic, NI: non-impact, E2A: event 2 acute, E2C: event 2 chronic.

Table 2: Within site comparisons of monthly orthophosphate data for each time frame at Grand Bay. Values are within-group summaries of sample size, median, and ranges for orthophosphate by station and time frame. Result letters indicate time frames within each station that were not significantly different based on multiple comparisons with Mann-Whitney rank sum tests. P-values were adjusted using the sequential Bonferroni method to reduce the probability of Type I errors. Sites are BC: Bayou Cumbest, BL: Bangs Lake, BN: Bangs North, and PC: Point aux Chenes. Time frames are E1A: event 1 acute, E1C: event 1 chronic, NI: non-impact, E2A: event 2 acute, and E2C: event 2 chronic.
